

## 365FarmNet component - Feed

You can enter and manage your key data on feeds with the 365FarmNet "Feed" module. You can select your feedstuffs from the 365FarmNet feed catalogue and also create new feed types with or without a template.

### The "Feed" module offers:

- Activation of the standard feed types from the feed catalogue
- Use of specifications to create your own feed types, in particular basic fodder, with information on contents
- Recording of own feed types with information on contents
- Detailed information on the contents
- Recording of prices for feedstuffs

### Contract terms

This component is available free of charge without restrictions.
