

## 365FarmNet component - CLAAS Telematics

Keep an eye on the activities of your CLAAS Telematics machines from anywhere. Let the component show you important real-time information and routes of your machines directly on the farm map. Further process the data in 365FarmNet.

### The "CLAAS Telematics" module offers:

- Real-time recording of position data of the activated machines
- Map documentation of track and yield
- Important machine data displayed in a condensed and clear manner (for example, . area covered per hour, operating hours or currently processed field)
- Display of the current machine status

Attention: This is not a telematics contract. First, you have to enter into a valid contract with your CLAAS dealer in order to be able to use this component for your telematics machines.

### Contract terms

This component is free of charge without any restrictions.
