**Smart systems communicate with each other on one platform**

## **ADAPT Framework connecting Topcon and 365FarmNet data**

- **New innovative ADAPT framework allows different systems to communicate for the first time**
- **ADAPT allows to document and process orders from Topcon terminals directly in 365FarmNet**
- **Data can be shared and processed in 365FarmNet from Q1 2018**

365FarmNet announced their cooperation with Topcon Agriculture at Agritechnica 2017. Starting in the first quarter of 2018, data from Topcon terminals can be easily documented and processed in 365FarmNet. The cooperation agreement between 365FarmNet and Topcon marks one of the early uses of AgGateway's innovative ADAPT Framework (Agricultural Data Application Programming Toolkit). ADAPT allows different company systems to "talk to each other".

### **Seamless management of machine orders from Topcon terminals**

For farmers who use 365FarmNet for their farm management this cooperation is a major step up on automation and security of data acquisition, analysis and documentation. With the introduction of this new data sharing system, processing machine orders from Topcon terminals is easy and secure in 365FarmNet: orders are sent directly to the input list and can be edited or posted seamlessly. This cooperation arrangement is a further step in the automation of documentation on agricultural holdings and makes it easier for farmers to meet their cross-compliance accountability requirements.

### **ADAPT – systems talking to each other**

For 365FarmNet, this cooperation is special, since it is the first time a new innovative system is being used for data transfer and data processing. The [ADAPT Framework](#) is an initiative by [AgGateway](#), a consortium of businesses serving the agriculture industry which includes both 365FarmNet and Topcon as members. The aim of the initiative is to make it easier for smart systems – hardware and software – from different companies in the agricultural sector to communicate with one another. It's as if the systems learn a shared language.

365FarmNet and Topcon will continue their cooperation into the future. This cooperation helps to advance further cooperation arrangements and data interfaces, to provide farmers with a Europe-wide platform for managing their entire machine portfolio.

**365FarmNet** is Europe's largest, multi award-winning cloud-based software for the entire farm management, independent of farm size and type of operation. The 365FarmNet platform is manufacturer-independent and cross-segmental and using partner Apps, covers all functions required for operational management. Starting with cultivation planning through to harvest, including important topics in the field of pesticides and fertilizers, from field to farm, from documentation to operational analysis.

The basic version of 365FarmNet is free of charge. This basic version already fulfils the requirements on the necessary scope of documentation for farmers. Farmers are able to book individual components subject to a charge in an innovative and continually growing modular system and adjust the platform individually to meet their needs. Using the free 365FarmNet Apps for iOS and Android, farmers are also in the position to document via their mobile devices meeting cross compliance regulations and enter a posting wherever the work has been carried out – on the farm or out in the field.

365FarmNet together with more than 30 European partners develops innovative applications for users from more than 20 countries. At present, the platform is available in five languages: German, English, French, Polish and Bulgarian. [www.365FarmNet.com](http://www.365FarmNet.com)
